

Release Notes:

Pages:

- Navigation bar works throughout all pages
- Index.js has skeleton of working code(get/post API calls and docker working)
- **Home page:**
 - Home page outline is functioning → next week we will start adding the cards of actual games
-

Register:

The basics for the register page included such as the input fields for email and password using bootstrap code templates. Additionally on the registration we included a header, footer and the ability to send message pop-ups using ejs partials. Additionally on the registration form we included a button that allows a user to navigate to the log-in page if they already have an account. Functional Javascript routes have also been added for the registration page such as a get route and a post route to pop-up the register page and then to add the new users information to the database.

Login/Logout:

- Login is functional with plans to properly hide the user password using hashing
- Logout is fully functional

Database:

- Found Steam data that we would be able to use for generating game randomizations
